Week 12 — User Manual

User manual

CSE4204-8B-T04 | Northern University of Business and Technology, Khulna

Table of Contents

1. Introduction
2. System Requirements
3. Installation
4. Account and Authentication
5. Dashboard Navigation
6. Module Guide
7. Roles and Permissions
8. Common Workflows
9. Troubleshooting
10. Support and Security

1. Introduction

This manual explains how business users and administrators can access and operate Enterprise NeXus. The hosted system is available through the live application; developers can run the same services locally.

2. System Requirements

- Modern Chrome, Edge, Firefox, or Safari for the hosted application.
- For local setup: Node.js 20 or newer, npm, a Supabase project, and a Gemini API key.
- For workflow automation: an n8n instance with the project workflows and shared secret.

3. Installation

1. Clone the GitHub repository and open it in a terminal.
2. In backend/, run npm install and copy .env.example to .env.
3. Set backend Supabase, JWT, Gemini, frontend, and n8n variables.
4. Apply the SQL migrations in supabase/migrations in filename order.
5. Start the API with npm run dev; the default local URL is http://localhost:5000.
6. In frontend/, run npm install, set NEXT_PUBLIC_API_URL, and run npm run dev; the default URL is http://localhost:3000.

The hosted application can be opened at https://enterprise-nexus-delta.vercel.app. Never place production secrets in frontend files or commit local .env files.

4. Account and Authentication

4.1 Registration and sign-in

Choose Register, provide a name, email, and password, then sign in. Login creates a protected session and redirects the user to the dashboard.

4.2 Password recovery

Choose Forgot password, submit the account email, and use the time-limited reset link.

4.3 Session and account controls

Use the profile menu to view account options, refresh the session, or log out. Administrators can manage users, roles, activation, approval, and account deletion from the Admin module.

5. Dashboard Navigation

The left navigation opens Dashboard, HR, Finance, Support, Analytics, Executive, and other role-enabled modules. The dashboard provides summary cards, recent activity, and shortcuts into the agents.

6. Module Guide

Module	How to use it
HR Agent	Post a job, configure criteria, upload PDF/DOCX/TXT CVs, review AI score, confidence, summary, strengths, weaknesses, and recommendation.
Finance Agent	Log or import transactions, inspect spend categories, review anomaly severity and explanation, and export records.
Support Agent	Create a ticket, read the AI classification and draft reply, send

	a response, escalate, resolve manually, or review automatic inactivity closure.
Analytics Agent	Review cross-module KPIs, generate reports, and inspect trends and recommendations.
Executive Agent	Ask a cross-domain question; the agent delegates to specialists and returns a concise briefing with next actions.
Security Intelligence	Review audit activity, access controls, risk indicators, and sensitive events where the role permits.
Store and Careers	Customers browse products, place orders, submit verified reviews, contact support, and apply to published roles.

7. Roles and Permissions

Role	Typical access
Customer	Store, orders, reviews, and support conversations
Candidate	Careers applications and application status
Employee or Manager	Operational modules permitted by role and assigned scope
Admin	User management, role changes, audit visibility, and platform controls

8. Common Workflows

7. Sign in and confirm the dashboard loads.
8. Open the relevant agent module.
9. Create or upload the business record.
10. Review the AI result, confidence, explanation, and status.
11. Take the available human action: approve, shortlist, reply, escalate, resolve, or retry.
12. Return to the dashboard or Executive module for cross-module context.

9. Troubleshooting

Symptom	Recommended action
Sign-in service is waking up	Wait for the Render backend cold start, then retry; check the health endpoint.
AI result is pending or failed	Review the record status and use retry when available; verify Gemini and n8n configuration.
Support reply is not visible	Refresh the ticket or product page and confirm the conversation has not auto-closed.
Access denied	Ask an administrator to verify the account role and activation status.
Upload rejected	Use a supported PDF, DOCX, or TXT file and verify file size and content.

10. Support and Security

Use the Support page for product questions and order-related assistance. Do not share passwords, API keys, or private business files in public messages. Administrators should review audit activity and rotate credentials if a secret is exposed.
